RS Display

Display system for universities and public spaces

RS Display is a display system suited for large deployments such as universities, hospitals, libraries, and other public spaces due to its distributed architecture.

Based on general hardware and a highly customisable platform, the system can be used for a wide variety of applications, and is easy to customise for most requirements.

Each display can be equipped with a variety of peripherals, such as indicators, card readers, and location beacons.

- ‣ Adaptable to existing infrastructure
- ‣ Requires no (or very little) equipment
- ‣ Centrally managed system
- ‣ Connects to local web-service or the cloud

- ‣ Updates immediate on all systems
- ‣ Displays are identical and with no local storage
- ‣ User friendly interface
- ‣ Automatic update of information

- ‣ 100% customisable interface
- ‣ Custom information displayed
- ‣ Interface with existing infrastructure
- ‣ Add custom peripherals
